

Congrès TI'DOC

GENERAL MEDICINE, A HOLISTIC APPROACH TO MEDICINE

General medicine is the art of creating connections. Engaging with specialists from diverse backgrounds helps improve the synthesis of information and acquire a more complete and global approach to practice. Ti'doc offers an introduction to general medicine through a multidisciplinary and cross-disciplinary perspective.

With the participation of Maylis AZIERE and Alice DIDIER

OBJECTIFS

- Enable students to broaden their knowledge by sharing professional experiences with their peers ;
- Discover new concepts ;
- Explore topics in greater depth ;
- Offer a shared experience between healthcare professionals ;
- And most importantly give future healthcare professionals every tool to make informed decisions in their daily practice.

The congress of the little doctor who will one day become great.

Founded in 2025, the French-speaking student training congress Ti'doc held its first edition during a whole week in April. In 2026, we are bringing back the event on March 27th, 28th and 29th. The main objective : to offer additional training opportunities to medicine, dental and pharmacy students from the first to the sixth year in Cluj-Napoca in Romania.

IMPACTFUL

Training future healthcare professionals is a priority : today's education shapes tomorrow's healthcare.

INTERNATIONAL

Medicine without borders, diverse experiences, enriched knowledge.

KEY FIGURES

- Over **500** participants ;
- **32** speakers including **24** doctors and **8** medical residents from a wide range of specialties ;
- **26** interactive lectures ;
- **7** hands-on workshops ;
- **6** collaborations with students and local associations ;
- **10** partnerships.

METHODOLOGY

A meeting shaped by solidarity and multidisciplinary exchange through a collaboration structuring the medical discourse and integrating a patient-centered preventive care perspective. A wide range of international speakers offer students various activities with a pedagogical and holistic approach to the medical field. We also benefited from access to the buildings and didactic materials of the Iuliu Hațieganu faculty in Cluj-Napoca, allowing us to offer reduced prices with a commitment to accessibility and equal opportunities.

RESULTS

Feedback from participating students suggests :

- A perceived improvement in medical communication skills ;
- A better understanding of the healthcare professional's role as a health educator and knowledge provider ;
- Greater awareness of the importance of education and prevention in future clinical practice ;
- Increased knowledge and greater autonomy in patient management, particularly in the management of primary emergencies.

CONCLUSION

The experience of the Ti'Doc association demonstrates that cross-disciplinary medical training, focused on communication and knowledge sharing, represents an effective way to prepare students in healthcare for future practice, particularly in general medicine. By training healthcare professionals to better explain and communicate medical knowledge, Ti'Doc contributes to a more preventive, human and patient-centered approach to care.

30TH WONCA EUROPE CONFERENCE 2026

June 30th - July 3rd 2026 - PARIS, FRANCE
